Braemar Evolution - Seeley International

The Evolution is the coldest*, ultra-low profile evaporative air conditioner available. The seamless style with curved louvres blends into the roofline and its discreet, streamlined look will disappear below the roof ridgeline, appealing to the discerning customer.

Total control is made easy using the touch screen MagiQTouch® controller.

Keep your home cool without leaving your doors and windows open. Install a security relief vent (sold separately) in your home and you can run your evaporative air conditioner while you are out, with all your windows and doors safely closed and locked. Your home will stay cooler as cooled air is released into the roof space. When you return home, open your windows and doors as normal, maintaining the fresh cool air throughout your home and open living areas.

For complete peace of mind, Braemar backs every one of its air conditioning systems with an industry leading comprehensive warranty programme. This includes a 3-year warranty, 10-year cover on all structural components, plus a hefty 25-year cover against corrosion, on its Permatuf® cabinets. Please refer to your homeowner's manual for all service and warranty terms and conditions.

There's never been a better time to invest in an evaporative cooler which is simple to maintain and operate and offers superior product performance. With **energy prices escalating and the increasing demand on the constrained electricity grid**, along with the **hot African summers, evaporative cooling offers a significant and increasing edge on refrigerated air conditioning** when it comes to energy efficiency, healthier air flow, performance, and lifestyle.

You can run your evaporative cooler on a small generator, UPS or solar, whilst still powering other household appliances.
